

How to use NARCAN NASAL SPRAY

If you see someone who may have overdosed on painkillers or heroin – act quickly! Don't leave the person alone. First, call 911 immediately!

If you have access to NARCAN (Naloxone) nasal spray, use it! If given early enough, NARCAN can reverse an overdose.

1 Lay the person on their back, and tilt their head

2 Remove NARCAN from package

3 Place the nozzle in either nostril

4 Press the plunger firmly to release the dose

5 Move the person on their side (recovery position)

DO NOT LEAVE THE PERSON ALONE

If the person does not respond after 2-3 minutes, another dose of NARCAN may be given in the other nostril.
